

Host Bora

Smart Property Management for Tanzanian Hosts & Landlords

Long-term Rental BnB / Short-stay Offline-first Swahili + English

What is Host Bora?

Host Bora is a mobile property management application built for landlords and short-stay hosts in Tanzania. It runs fully offline on the user's device and syncs data to a cloud backend whenever a connection is available. A single account can manage multiple properties across both long-term rental (Rent) and BnB short-stay modes simultaneously.

Who Is It For?

- **Long-term landlords** - Manage tenants, leases, monthly rent collection and arrears.
- **BnB / short-stay hosts** - Track guest bookings, check-ins, and occupancy calendar.
- **Multi-property owners** - Oversee an entire portfolio from one dashboard.

Key Features

P

Properties & Units

- Add unlimited properties, each with individual units.
- Set operation mode per unit — long-term rent or BnB.
- Photo support via `PropertyListingImage`.

T

Tenants & Occupancy

- Add tenants with lease start/end, rent amount, currency, and frequency.
- Full tenant ledger: payment history, arrears, and expected schedule.
- Tenant scoring / rating system.
- Guest history module for BnB stays.

Financials

- Record income and expenses per property.
- Financial overview with net income, arrears, and revenue trends.
- Multi-currency support with live exchange-rate hints.
- Scheduled payment reminders with push notifications.

Maintenance

- Schedule and track maintenance tasks per property.
- Syncs maintenance records to the backend server.
- Activity log with timestamps and status.

LUKU / Utility Tracking

- Track electricity (LUKU) top-ups per property unit.
- Smart dashboard with per-unit stats.
- Meter number auto-extracted from SMS/notes via regex.
- OCR parser for LUKU receipt SMS messages.

Messaging (SMS & WhatsApp)

- Send bulk SMS or WhatsApp messages to tenants and guests.
- WhatsApp Business template builder using Meta Cloud API.
- Variable substitution ({{1}}, {{2}}, ...) in templates.
- Save, reuse, and organise message templates.
- Device contact picker and saved group links.

Calendar

- Host calendar showing bookings, check-ins, and check-outs.
- Visual gap detection between bookings.
- Colour-coded occupancy view.

A**AI Manager**

- Floating AI assistant for natural-language portfolio queries.
- Answers questions about income, occupancy, arrears, and maintenance.
- Uses local offline data — no internet required for insights.
- Accessible from any screen via a persistent FAB.

S**Security & Access**

- 4-digit PIN lock with biometric (fingerprint / Face ID) support.
- Session token expiry with automatic logout.
- Subscription gating for SMS/WhatsApp features.
- App-lock timeout configurable by the user.

O**Offline-first Architecture**

- All data stored locally in SQLite (sqlite).
- Changes queued via OfflineSyncQueue and synced on reconnect.
- Works fully without internet — syncs transparently in background.

Technology Stack

- **Frontend** - Flutter (Dart) · GetX state management · sqflite local DB
- **Backend** - Kotlin · Spring Boot · SQL Server · Flyway migrations
- **Integrations** - Meta WhatsApp Cloud API · Firebase (push notifications) · local_auth (biometrics)
- **Languages** - English and Swahili (full i18n via ARB/localizations)
